MH6003 / instructor review notes

Cryptography • Course-information draft • 7 student-facing slides

This sheet records the inputs used to prepare the draft and the few details that remain open. The slide deck is ready for the instructors to review and revise.

Information carried into the slides

Item	Draft content and basis
Course	MH6003: Cryptography; 3 academic units, from the course outline.
Instructors	Prof. Wang Huaxiong — HXWang@ntu.edu.sg; Dr. Su Le — LSU1@e.ntu.edu.sg. Both were confirmed as instructors by the user.
Weekly topics	The 13-week outline is retained. Week 12 is regular teaching. Week 13 has about one hour of revision followed by the two-hour final exam, as explicitly clarified by the user.
Assessment weights	Mid-term 20%; group project 30%; final examination 50%. These sum to 100% and come from the assessment table.
Exams	Mid-term: week 7, 1 hour, closed book. Final: week 13, 2 hours, closed book. Duration and format come from the discussion screenshot; week 13 is confirmed by the user.
Project	Teams of 3–4 students; form the group and choose a topic by week 7; work in weeks 8–11; submit by the end of week 11. State individual contributions.
Session window	6:30–10:00 pm, from the earlier user instruction. No exact mid-term or final-exam clock time is inferred from this window.

How the timing clarification was applied

The screenshot suggested leaving weeks 12–13 for final-exam review. The later user clarification takes precedence: week 12 still contains the planned regular topics; week 13 combines a short revision with the final examination. No earlier topics were shifted to make a second revision week.

Source record and remaining details

Source record

OBTL MH6003.docx
Course identity, instructor names/emails, weekly topics, assessment weights, and contribution declaration. Uploaded document inspected; original not redistributed.

User-provided grading discussion screenshot
One-hour mid-term, two-hour final, both closed book; teams of 3–4; group/topic selection by week 7; project weeks 8–11; submission by end of week 11. Arrangements transcribed without email headers, recipients, or unrelated correspondence.

User clarification in this conversation
List both instructors. Week 12 remains regular teaching. Week 13 has about one hour of revision followed by a two-hour final. Takes precedence over the screenshot's suggestion to reserve weeks 12–13 for review.

Earlier user instruction in this conversation
Evening session runs from 6:30 to 10:00 pm. No weekday, venue, calendar dates, or exam clock times were supplied.

Details not specified by the inputs

Calendar dates, weekday, venue, and exact examination start times are not supplied. The deck therefore uses week numbers and durations. Permission for calculators or other materials is not inferred from "closed book."

The detailed project brief, deliverables, submission platform or format, and precise contribution-moderation procedure remain for the instructors to specify. The draft does not invent these requirements.

Template points kept out of the student-facing grading summary

The project appendix mixes instructor-rated contributions with references to teammate scores. The deck keeps the clear requirement to state contributions and does not reproduce the inconsistent numerical moderation formula.

The generic absenteeism paragraph mentions a participation grade, while the assessment table assigns all 100% to the mid-term, project, and final. The deck follows that explicit three-component assessment structure.

The outline lists 39 planned contact hours. The draft does not convert the user's evening clock window into a new contact-hour total; the two quantities are not treated as interchangeable.

Review and revision

The student-facing deck is a draft for instructor review. It contains the requested contact details, week-by-week schedule, assessment weights, exam arrangements, and project timeline. It does not redistribute the original course document, screenshot, email headers, or unrelated correspondence.
